# Backup Exec™ 11d QuickStart Upgrade

Symantec is pleased to bring you the Symantec Backup Exec™ for Windows Servers QuickStart Edition, the starting point in the Backup Exec family of products for protecting and managing your business-critical data.

Ideal for entry-level needs, Backup Exec for Windows Servers QuickStart Edition is a high-performance data protection solution designed for a single Windows® 32 bit or x64 server. With wizard-guided operations and a complete full-featured user interface, Backup Exec QuickStart balances simplicity with fast, reliable backup and restore capabilities using any combination of disk and tape, or a single drive autoloader. For higher capacity multi-drive libraries, users can expand their library support to target additional drives by purchasing the Backup Exec Library Expansion Option.

For compliance and increased data security during backup, transport, or off-site storage, Backup Exec QuickStart Edition offers optional 128 or 256 bit AES data encryption before transfer to disk or tape, and now also includes a five system license of the Backup Exec Desktop and Laptop Option for automating protection of critical user data files as a standard feature.

## SIMPLE TO GROW SIMPLE TO MANAGE

Backup Exec QuickStart Edition can automate protection of business applications that are shutdown prior to backup by using pre/post commands. If your data protection requirements scale to include network file and application servers, you can seamlessly upgrade to the Symantec Backup Exec for Windows Servers by contacting your reseller or Symantec. With an upgrade, what additional standard features are included and further capabilities can be added with Backup Exec agents and options?

Symantec Backup Exec™ 11d for Windows Servers is the gold standard Windows data recovery providing continuous, high-performance, certified disk-to-disk-to-tape backup and recovery.

Now expanding continuous protection to Exchange and SQL Server, in addition to file servers and workstations, Backup Exec eliminates daily backups and provides point in time recovery. Recover critical data in seconds with new, improved protection for Microsoft Applications. Individual Exchange messages, folders, and mailboxes can be recovered in seconds – *without* mailbox backups.

For SharePoint Server, Backup Exec 11d enables single document recovery of SharePoint Portal Servers, as well as the ability to recover SQL 2005 snapshots in seconds. It also introduces protection and recovery for DB2, Oracle RAC, and Oracle RMAN..

With a complete list of high performance agents and options for fast, flexible, granular protection and scalable management of local and remote servers, Backup Exec 11d is the gold standard Windows data recovery

## AVAILABLE AGENTS AND OPTIONS
