pcAnywhere Symantec pcAnywhere™, the world's leading remote control solution ¹ , helps organizations manage remote computers securely—even across routers and firewalls. For compatibility in today's heterogeneous operating environments, the solution supports multiple platforms for both host and remote systems, including Windows®, Linux®, and Mac OS X®. All hosts can also be securely accessed from Microsoft® Pocket PC devices or Web browsers. Helpdesk personnel can quickly start a remote control session with a machine that does not have pcAnywhere™ installed; can remotely control mouse and keyboard input over a network, modem-to-modem, direct cable connection, or standard Internet connection utilizing a Web browser; and can transfer files or folders while troubleshooting a device. A new gateway component enables real-time discovery of multiple devices behind firewalls and NAT devices, mitigating private dynamic IP challenges and minimizing port opening or forwarding. The new host invitation feature simplifies the process of establishing a reverse connection to a helpdesk from behind network devices. Symantec Packager simplifies installation and setup and allows administrators to tailor the solution to best fit the needs of the organization. And support for 13 authentication methods allows customers to use existing network authentication user names and passwords with pcAnywhere™.	pcAnywhere Host and Remote v12.0	3	10556879	✓	✓
